

MDToolbox – 2024 Compendium Enhancements

Summary

- MDToolbox is upgrading the drug compendium/lookup and going forward new products will be added bi-weekly or weekly depending on availability
- Drug lookups include more up to date choices but 99% of the lookups data will remain unaffected.
- Supply lookups is now a more precise lookup with more packaging options

Will my charts and medication history be affected?

No! Your charts and medication history will remain untouched after the upgrade – the medications you prescribed will not be changed in any way – all history is unaffected by this upgrade and all interaction checking will continue to work with your history.

Will the drug names change? Will I still be able to find the medications I always prescribe?

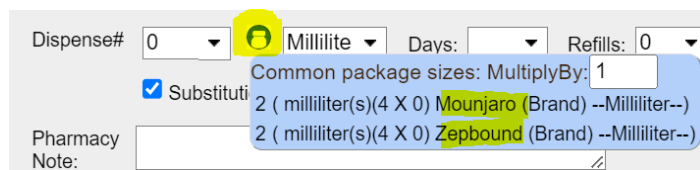

99%+ of the medications will have the same names you have always prescribed them with – only very minor differences because the compendium will now be more up to date.

Generic vs Brand Names

The prior lookup only showed exact drug names on the market when searching (so you couldn't find the generic if it was only available by a brand name) --- In our new version – the new drug lookup is including all brands and generic names if there is at least one version of it still on the market.

You can always check exactly what Brands / Generics are available for any Drug as well!

From Rx Writer -- Just click the "PACKAGING" button: (pill bottle icon)

Dispense# 0 Millilite Days: Refills: 0

Substituti

Common package sizes: MultiplyBy: 1

2 (milliliter(s)(4 X 0) Mounjaro (Brand) --Milliliter--)

2 (milliliter(s)(4 X 0) Zepbound (Brand) --Milliliter--)

Pharmacy Note:

Above image shows tirzepatide is available as brands Mounjaro and Zepbound

Supply Lookup Notes

The supply lookup has more changes than the drug lookup. While many will remain unchanged, we will see quite a few updates. Many new supplies that we didn't have before will be available however a few supplies the lookup used to have now are listed differently. If you cannot find the supply you need "free type" in the supply name or call support for assistance.
